Keywords: Community engagement, social, environment, values, strategy

ABSTRACT

Geothermal projects are globally known to experience challenges associated with failures in engagement of host communities or lack of prioritization of the same from the onset of the project timeline. Strong Community Engagement Strategy deemed an indispensable tool for effective engagement of host communities and stakeholders in geothermal projects. Prior involvement and sustained collaboration has a resultant benefit of cost effectiveness, advantage of de-risking, and keeping project development on-track thereby creating a shared value for all parties involved.

Kenya Electricity Generating Company (KenGen), is largest power generator in Kenya, with over 500 MWe installed capacity of geothermal power at Olkaria near Naivasha. Olkaria is also a home to the host Maasai community where the Company has previously encountered strained relations with the host Maasai community over socioeconomic and cultural issues associated with KenGen’s geothermal projects. The constraints have resulted to delays, cost overruns, and even project cancellations where costly responsive decisions while the Company continued to pursue sustainable approach that would offer a final solution to similar challenges.

The best approach to addressing community engagement challenges was finally drawn from the recent New Zealand and Kenya exchange programme held both in New Zealand and recently in Kenya. The partnership programme brought together the Maori and Maasai communities from the two countries, through facilitation by Power Africa and its partners, the United States Energy Association (USEA) and the Geothermal Energy Association (GEA). It culminated into a proactive engagement of participants through joint open discussions, situation analysis, separate breakout sessions involving the two indigenous communities and respective geothermal producing companies, site visits and general observations. The participants of all genders from Maasai Olkaria community included leaders, youths, women, the senior members with cultural memories of the community. The participants identified challenges, failures, and successes experienced by both KenGen and the local Maasai community. Strategic actions and vision were proposed that engender mutual benefits and shared values. Thereafter community formulated their vision-2050 while KenGen formulated Value based system to anchor community engagement strategy borrowing from best practices learnt from New Zealand and the findings of the 1 week exchange programme. The strategy has since been drafted for approval by KenGen with expectations that it will ensure sustainable partnership and safeguards the Company against risks, costly legal suits, project delays and civil disturbances while fostering interests of the host community. The paper recommends, implementation and continuous review of now developed Community engagement strategy.

1. BACKGROUND

1.1 Introduction

Kenya has set for itself the ambitious goal of becoming an industrialized economy by the year 2030 and has identified energy as a key enabler. The country is therefore implementing an ambitious energy infrastructure development program to ensure there is adequate electricity to power the planned economic growth.

As the country’s largest power producing company, KenGen is one of the key players to realize this development blueprint. Focusing mainly on renewables, especially geothermal energy, KenGen has developed a strategy which will see it expand its energy portfolio by 721 MW by the year 2020. Currently, the company has an installed capacity of 1631 MW, with 534 MW (32%) from geothermal, making it the leading geothermal power producer in Africa. Besides Kenya having has geothermal resources estimated at 10,000MW, new energy projects are set for completion by 2020. The projects include the Olkaria V 140MW, Olkaria VI 140MW, Olkaria VII 140MW, Olkaria I Unit 6 70MW, Olkaria I Rehabilitation 5.7MW, and Olkaria I AU & IV topping plant 60MW.

The objective of the paper is exposit on the gains from of knowledge sharing from the KenGen New Zealand partnerships that among others seek to ensure sustainability of geothermal projects in line with corporate goals, mutual relationships between power developers, their partners and community, effectively address potential challenges through best approaches for mutual benefits and shared values. The paper details the objective of community engagement strategy from both KenGen and Community’s perspectives, the Value based approaches to community engagement, expected outcomes, key issues addressed in the strategy including community’s vision 2030 and expectations.
1.2 Problem Statement /justification

Throughout the world, geothermal power projects have often experienced challenges, delays and termination due to insufficient and sometimes inadequate engagement with communities and their stakeholders. Often, the developer does not prioritize community engagement early in the project timeline, which can often lead to the spread of misinformation, rumors, and prematurely formed opinions, all of which can cause delays and higher project costs.

The Kenya Electricity Generating Company (KenGen), has encountered costly project delays due to unresolved grievances from communities. In addition to hosting one of the world’s premier geothermal resources at Olkaria in Naivasha, Kenya is currently the ninth largest producer of geothermal power in the world, Olkaria is home to a population of indigenous Maasai pastoralists. Community objections over land acquisition and resettlement, transmission lines, pipeline infrastructure, and access roads have led to project delays and cost overruns.

By putting in place a strong community engagement strategy prior to starting work on a geothermal project, a developer will have the tools in place to engage with local communities and stakeholders at appropriate times in the development timeline; these tools will help to de-risk projects, keep development on-track and create a shared value for all parties involved.

Relations between KenGen and Maasai and other local communities have sometimes been tense. Consequently, the company has made a deliberate effort to improve relations with its neighbors. KenGen is currently working with partners, including United States Agency for International Development (USAID) led Power Africa to develop a community engagement strategy with a view to delivering its power projects on time and within budget.

1.3 Goals, Objectives

The main objectives of the paper include:-
1. To outline emerging issues and best lessons from New Zealand on community matters,
2. To identify the objectives of mutual community engagement from both KenGen and Community’s perspectives.
3. To identify emerging community issues and agreeable operational principles and values associated with KenGen’s projects
4. To recommend a Community Engagement Strategy and long term Vision 2050 for the Maasai Community.

1.4 Scope

The scope of the paper covers a review of past successes elsewhere (in New Zealand) and in KenGen’s projects, the emerging issues associated with previous structural and capacity failures, poor implementation, and inadequate information and inadequate management of community issues. It identifies the objectives by both the Company and community for future sustainable engagement including proposed Maasai Community’s Vision 2050 and KenGen’s strategy to future community engagement. Finally, the paper conceptualizes a Value based approach to address key social, economic, cultural and livelihood issues with expected outcomes for both KenGen and Maasai community for their posterity.

2. REVIEW OF BEST PRACTICES ON COMMUNITY ENGAGEMENT

New Zealand, Kenya, Power Africa and its partners, the United States Energy Association (USEA), facilitated a Kenya–New Zealand Partnership to share experiences, and model best approach to community engagement that engenders both the development of geothermal power as well as sustainable development and cultural preservation of host communities. The New Zealand entities participating in this partnership included Contact Energy, Mercury, and Ngati Tahu Trust, Tauhara North Number 2 Trust (TN2T) and Kenya was represented by KenGen and the Olkaria Maasai Community. This program consisted of four total exchange visits in 2017, two to New Zealand and two to Kenya. Over these four visits, members from the partner organizations traveled to the other country to share experiences and lessons learned for community engagement in geothermal development.

The partnership and inclusion of the community groups in the exchanges and discussions was undertaken through collaboration and shared goals for successful outcomes. Community engagement has since been identified as necessary part of life cycle of energy projects. It helps to minimize conflicts and ensure prior and adequate information and sanitization of host commutes in energy driven projects. This enables the power project developers to identify specific community concerns and set sustainable management and resolution of any disputes within reasonable time. Best case study for KenGen is Contact Energy in New Zealand’s power sector and roles of Power Africa and USEA in the global issues in power generation and community matters that can guarantee social license on project success. New Zealand’s approach especially Contact Energy’s corporate initiatives to sustainability issues linking geothermal activities and Maori Community reveals a high level of trust, independence as well as clarity on the roles, values and rights of each parties with regard to land use, sharing of benefits from power revenues as well as environmental sustainability. The case study in New Zealand relatable to KenGen as it serves as a model for how proactive stakeholder engagement can help energy developers design smart social and environmental programs. Experience in New Zealand’s geothermal sector shows that community engagement helps to avoid costly litigation, project delays and public agitation while creating shared value among utilities and indigenous groups. Based on the mutual goals and objectives of the partnership and exchange programme, the results from the discussions and filed experiences in Maasai Olkaria was very beneficial in forging way forward to the present and future projects linking KenGen, Maasai and other stakeholders.
3. RESULTS

3.1 Best Lessons from New Zealand
KenGen borrows from the following aspects effectively mainstreamed in New Zealand:-

- There are set of values and principles guiding mutual and shared utilization of resources safety and ecosystem conservation.
- The indigenous Maori are organized in a self-governing entity with representatives effectively addressing the communities sociocultural and economic needs.
- Strong systems in land tenure and property rights that are secured.
- Communities have guiding strategy to achieving their goals.
- The community is proactively engaged as partners and widely informed on the project: revenues, impacts and benefits.
- Sustainability initiatives on cultures and value system of Maori and high level of enlightenment of Maori culture.
- High level of independence and self-sufficiency by both Maoris and Power utilities.
- Sustainable partnerships that uphold rights and cultures of the Maori tribes as well as respecting interests of power utilities.
- Enforceable agreements on benefits sharing and corporate initiatives where each party meets their obligations.

3.2 KenGen’s Community Management Goals and Objectives
KenGen set the following goals and objective based on shared values with the Community engagement.

- Provide specific guidance for KenGen to plan and conduct effective community participation and collaboration throughout the power project lifecycle.
- Identify the best structures and methods for KenGen to provide communities with balanced and objective information on proposed power projects and community development initiatives in order to obtain their feedback and seek their input and attain and maintain a “social contract”.
- Develop strategies for KenGen to build strong and effective relationships with stakeholders, including the communities, regulatory officials, local and national government officials.
- Integrate considerations for marginalized groups within the community, including ethnic minorities, persons with disabilities, vulnerable women, and children.
- Establish a mechanism for effective and timely resolution of community grievances.
- Continuously improve KenGen’s community engagement practices through monitoring and evaluation of our activities.

3.3 Maasai Community Goals and Objectives
The community identified the following specific goals with regard to engagement with KenGen:

i. Achieve cooperation and unity amongst themselves through one voice.
ii. Address historical land issues and local community empowerment.
iii. Conservation and preservation of cultural rights.
iv. Improve access to primary secondary, post-secondary education and in school.
v. Life skills and technical trainings amongst the members of community for capacity building.
vi. Foster environmental sustainability and inclusively championing for the community interests.
vii. Sustain collaboration with KenGen and her partners for mutual success.

3.4 Community Engagement Strategy and Expected Outcomes
Over the course of the partnership, KenGen and Contact Energy worked together to develop a values-based community engagement strategy that KenGen could implement moving forward. Both the goals of KenGen and the goals of the Community were taken into account while creating this framework, to ensure that the final product will allow both company and community to succeed and flourish as additional geothermal resources are developed in Olkaria and throughout Kenya. KenGen’s ability to effectively and respectfully engage communities will develop and enrich KenGen’s ability to:

1. Attain initial buy-in (social license) for new power projects to reach financial close and proceed to construction and operational.
2. Enhance or maintain the social license for all existing power stations for the safe, continuous production of power for the country.
3. Develop Community Long Term (50+ years) Strategic Plan Development
4. Develop a KenGen strategy to build capacity and capability within the community through:
   a. Capacity building for Community on co-existence and legal structures
   b. Improvement/revitalization of community center to make it a revenue source (KenGen & Community).
   c. Analysis of other economic concepts/investment opportunities for Community.
5. Formation of Partnerships, hence identify topics for a relationship building program with communities with a view to:
   a. Focus on Potential development opportunities around the cultural center.
   b. Expand/strengthen stakeholder coordination committee – more regular meetings to identify shared values and interests, build respect and trust.
   c. Help Community to develop a communication plan to support communications both internally and with KenGen.
   d. Explore potential mutually beneficial monetary partnerships and cascading uses.
In order for KenGen to be truly effective and efficient in its community engagement initiatives, it must be will embedded within all levels of KenGen’s corporate structure permeating down through ALL departments of the organization, when relevant, all contractors. The strategy will therefore be rolled out to KenGen top management, staff, the communities and relevant stakeholders to help them understand and operate within KenGen’s values and principles.

4. DISCUSSIONS

4.1 Lessons from New Zealand Case

The results show that KenGen outlined the failures and success as a basis of founding a new strategy in the light of lessons learnt from New Zealand. KenGen has identified key aspects for review in dealing with communities:

- Internal community engagement strategy; and an engagement structure with key roles and terms of reference
- Multi-disciplinary team working in harmony; to effectively address diversity in community issues
- Capacity building and entrenchment of the principles and values for sustainable partnerships with communities.
- Accurate information and awareness by host community and power operators
- Identifying veritable community members; bona-fide leaders of a community and involvement of full spectrum of relevant sectoral stakeholders and partners in community initiatives: health, water, resettlement….
- Land acquisition should be focused more on legal aspects as well as historical and communal relationships with land and natural resources
- Comprehensive mapping and identification of all the affected persons in addition to the host communities
- Identification/mapping of stakeholders and their geopolitical, cultural, historical scenarios prior to land acquisition
- KenGen should tell her story well about the great community initiatives and milestones achieved that are underestimated or unknown.
- Managing expectations and ensure that sustainable investment initiatives through models that do not create over reliance and dependency on KenGen.

4.2 KenGen’s has proposed Value Based Principles

KenGen’s has proposed a Value Based principles on which a community engagement strategy has been prepared. The same has been shared with the staff in all the Company’s operational areas and all comments incorporated in the finalized Community Engagement Strategy document. The principles will now be embedded to the corporate culture to embrace rights, needs, culture and values of communities as well as upholding corporate investment strategies and rule of law.

KenGen seeks to achieve sustainable value creation, social license to operate and grow from good to great from generation to generation. This will be realized through principles for community engagement strategy as shown in Figure 1. The description of purpose and strategic actions are shown in Table 1.

![Figure 1: Key principles of community engagement strategy towards KenGen’s strategic goals](image-url)
Table 1: Summary of KenGen’s principles, purpose and strategic actions in community engagement

<table>

</table>
| 1. Unity               | A strong value-based relationship and common understanding of issues between KenGen, communities, and stakeholders. Creating and maintaining a win-win-win relationship for all parties. | **KenGen Will:**
|                        |                                                                         | a) Endeavour to build trust through transparency with KenGen, communities and stakeholders. This starts with mapping stakeholders and committing to treating communities and stakeholders fairly. |
|                        |                                                                         | b) Build an understanding of the structures of communities and stakeholders.            |
|                        |                                                                         | c) Review KenGen committees and communication vehicles to streamline these practices. Be a proactive leader in communication, coordination, and change. |
|                        |                                                                         | d) Establish a multi-disciplinary team to manage these initiatives. Foster respectful relationships and understanding of each other. |
|                        |                                                                         | **KenGen Will Not:**
|                        |                                                                         | a) Promote individual interest over the community interest. Sponsor divisive or politically-sensitive initiatives or activities. |
| 2. Collaborative Commercial Success | Creating an enabling environment for KenGen and stakeholders’ commercial success and sustainability. Balancing the priorities of KenGen’s stakeholders, including commercial priorities of the Government of Kenya, KenGen shareholders, and the communities to create a win-win-win situation. | **KenGen Will:**
|                        |                                                                         | a) Provide mentoring, employment and internships for communities.                      |
|                        |                                                                         | b) Use KenGen resources to help remove barriers to commercial opportunities for communities. Partner with communities to introduce alternative livelihoods-commercial streams. |
|                        |                                                                         | c) Make available KenGen resources, lands, etc. that are not otherwise being used to the communities for commercial operations. |
|                        |                                                                         | **KenGen Will Not:**
|                        |                                                                         | a) Promote individual interest over the community interest. Sponsor divisive or politically-sensitive initiatives or activities. |
|                        |                                                                         | b) Seek partnerships on tourism/commercial endeavors.                                  |
|                        |                                                                         | c) Providing/developing geothermal and other energy resources for community commercial ventures. |
|                        |                                                                         | d) Providing business opportunities to communities during KenGen projects. Source corporate gifts from community vendors. |
|                        |                                                                         | e) Make in-kind support available to communities in setting up a business, legal affairs, education, marketing, health, accounting, etc. |
|                        |                                                                         | f) Develop a “menu” of potential investors for use by communities. Strive to spread benefits evenly among communities by operating in a clear and transparent manner. |
|                        |                                                                         | g) Ensure sustainability of human and financial resources, energy resources,            |

Panels can be added by inserting the data in the table above.

<tr>
<td>4. Sustainable Operations</td>
<td>Ensure the long-term commercial success of KenGen and its stakeholders through collaborating with stakeholders and communities to make the maximum possible contribution to the social and economic well-being of people and communities through meeting their energy needs both now and in the future. Optimizing resources to be deployed in an efficient and sustainable manner. Commitment to cooperating with communities to ensure environmental sustainability and preservation of important cultural sites, which could be managed through sustainability committees. Build a shared understanding among stakeholders and communities of KenGen’s purposes and operations. Proactive efforts to protect clean water supplies and enable access for KenGen and communities to sustainable water supply. Land management education to ensure sustainable feedstock.</td>
</tr>
</tbody>
</table>

**KenGen Will:**

a) Cooperating and sharing information with other developers, government, regulatory agencies, and relevant stakeholders to support sustainable operations.

b) Minimize negative environmental impacts of KenGen projects. Establish and empower joint KenGen/community sustainability committees through training, education, etc.

c) Use sustainability committees to educate communities about water management, land use, crop protection, and other environmental integrity priorities, as well as to build understanding of the energy-environment nexus.

d) Promote green waste management practices. Arrange public events and initiatives to promote habitat conservation, animal protection, etc.

e) Public education around invasive species.

f) Facilitate the sharing of information about geothermal resource areas and develop co-management plans.

Facilitate employee cleanup days

**KenGen Will Not:**

a) Promote projects that adversely affect the environment.

| 5. Land | Acknowledgement that land is critical to both community well-being and long-term viability of KenGen’s business. Educating communities about the important of land title, trusts, and laws – and the benefits of communal connectivity. Protecting access to land for community cultural practices and livelihoods. Explore the possibility of mixed-use leases and rights-of-way on KenGen land parcels. |

**KenGen Will:**

b) Acknowledge and emphasize that KenGen understands that land is critical to community well-being and traditions.

c) Work collaboratively with communities to meet each other’s aspirations about land use. Explore the possibility of access and mixed use leases and rights-of-way on KenGen land parcels.

d) Inform the communities on protecting land rights, title, trust, and where possible and appropriate, act as advocates for community land rights.

e) Support communities to map and protect community land and cultural sites by making available KenGen technical and legal resources.

f) Help communities to understand land boundaries and uses by sharing mapping information.
| 6. Champion Community Interests | Understanding community interests and spreading that knowledge within KenGen. Empowering staff to take up and champion these causes. Acknowledging that some actions necessary for growth of the communities are outside of KG control, and being an advocate for community interests when they align with KenGen’s engagement principles and strategy. | g) Involve communities in the life cycle of project development – planning, execution, project close. Preparation of resettlement action plan and diligence in its implementation to ensure, just, fair and timely compensation should relocation be required.  
**KenGen Will Not:**  
 a) Uproot communities from rightful land or without prior and informed consent. |
| --- | --- | --- |
| KenGen Will: | a) Incorporate cultural education (cultural inductions, etc.) for KenGen staff, management and contractors.  
b) Advocate on behalf of communities for additional resources from government where/when possible and in the best interest of communities' self-sufficiency.  
c) Preserve KenGen’s status as a neutral and impartial party. Extend health and safety education from staff to communities.  
b) When possible, partner with communities to provide basic healthcare and consultative services.  
c) Research partnership opportunities with NGOs and volunteers to provide additional resources.  
d) Support communities to protect access to clean water, sanitary communities, and sustainable settlements.  
e) Consider employee volunteer days within the communities and other community outreach efforts.  
**KenGen Will not:**  
 a) Marginalize communities by championing the interests of a particular group or individual over those of another.  
b) Interfere with communities’ self-determination of their own interests.  
c) Participate in or sponsor protests or political dissidence. |
| 7. Protection of Culture & Lifestyle | Acknowledging that  
- KenGen operates within cultural environments that should be respected and protected. Enabling communities to retain cultural traditions while also helping them to take part in the modern economy.  
- Supporting community health aspirations while maintaining connection with traditional cultures and extending community outreach efforts. | **KenGen Will:**  
a) Engage with stakeholders to create an awareness of the cultural context in KenGen projects.  
b) Undertake to work with communities to preserve cultural sites. Building awareness and respect of cultures among KenGen staff and stakeholders.  
c) Encouraging a community celebration week/day/forum/etc. to celebrate local cultures and extending community outreach efforts. |
Were et al.

8. Independence

KenGen Will Not:

- Usurp government or community mandates for health and cultural initiatives.

KenGen Will:

- Support initiatives to help communities transition to self-sufficiency.
- Strive to enter equal partnerships with communities and stakeholders.

KenGen Will Not:

Invest in initiatives that do not contribute to communities' long-term self-sufficiency or create a culture of dependency.

9. Affordable, Reliable Access to Energy

KenGen’s mandate is to provide affordable and reliable energy for the nation. The communities have a role to play in helping KenGen deliver on this mandate.

KenGen Will:

- Cooperate with communities to ensure social buy-in so that KenGen projects can deliver affordable, reliable power.
- Inform communities about how the local resources contribute to providing energy for the nation.
- Explore possible partnerships with communities to supply energy (excluding direct sale of electricity) for mutually beneficial commercial ventures.

KenGen Will Not:

- Provide direct supply of electricity to communities or pay electricity bills.

4.3 KenGen’s Community Engagement Strategy

The exchange programme reinforced the necessity of a comprehensive corporate community engagement strategy to achieve sustainable value creation, social license to operate as well as move the Company from good to great from generation to generation. To this end, the Company prepared a community engagement strategy. The structure of the community engagement comprises of the following:-

- Overview of KenGen’s Past & Current Experiences with Communities
- The underlying policy, legal and regulatory landscape in Kenya
- New/Pending Legislation and Financier Guidelines
- Purpose of the Strategy: Core Values and community Engagement Principles
- Goals & Objectives
- Constitution of a Community
- Community Engagement in the power project development cycle
- Action Plan and budget for implementation
- Respective responsibilities of staff and management within KenGen’s organization structure
- Policies and Procedures that may require review and modification
- Complementary policies on land and resettlement, KenGen foundation, environment, budgeting, knowledge management, Corporate Social responsibility and sustainable Investment, Human Resource and stakeholder engagement policies.
- Elements & Approach to Implementing Community Engagement.
Plans to Launch and roll out the Strategy are in progress.

4.4 Olkaria Maasai Community Vision 2050

While KenGen worked with Contact Energy to develop their values-based approach to community engagement, the Olkaria Maasai Community worked with representatives from Ngati Tahu to identify key areas that they would like to focus on for their community’s growth over the next 30 years in order to become self-sufficient and no longer dependent upon KenGen. They have decided that the document they will produce for the community will be called Vision 2050. The main areas that were identified by the group as priorities for the community were Education, Culture, Housing, Health, Unity/Cooperation, Land, and Business.

The Maasai representatives discussed their end goal in each of these topics and worked on creating a vision statement that would lead a community action plan. Within this group of 11 Maasai representatives, one was selected to be the “project manager” and to work closely with KenGen during the development of the Vision 2050 document to ensure that the two groups have complementary goals.

The community has set a long term goal plan (Vision 2050) during which the following aspects shall have been realized through engagement, linkage and partnerships.

<table>

| 1. Education                   | - Provision of a boarding primary and secondary school.  
- Enhanced access to university education.                                                                                                                        | - Sustainable initiatives to:  
  - Build and equip Primary boarding schools and Secondary boarding schools.  
  - Support university studies.                                                                                                                                      |
| 2. Culture                      | - Learn, maintain, teach and preserve the Maasai culture and traditional values throughout generations on such aspects like marriage, respect, family roles  
- Develop the Maasai Cultural Centre for:  
  - Cultural teaching centres  
  - protection of Maasai cultural sites/heritage and values by stakeholders                                                                                       |                                                                                                                                                                                                                 |
| 3. Housing                      | - Affordable modern housing that embraces the traditional Maasai design, for the purpose of teaching the future generations  
- Sustainable housing designs  
  - traditional Maasai architecture  
  - intra/inter-generational teaching and linkages                                                                                                                    |                                                                                                                                                                                                                 |
| 4. Health                       | - Accessible health services for various health needs including maternity wings, accessible VCT centers  
- Modern health service characterized with:  
  - centres for research on traditional herbal medicine  
  - fully equipped health facilities and staff                                                                                                                      |                                                                                                                                                                                                                 |
| 5. Co-operation                 | - A socially cohesive Maasai community united by a shared vision to genuinely articulate and represent community issues.  
- shared vision and mutual respect to ensure  
  - Reliable Community leaders  
  - Representation.  
  - accountability                                                                                                                                                |                                                                                                                                                                                                                 |
- Successful apology, negotiation and settlement from the government.                                                                                                |                                                                                                                                                                                                                 |
| 7. Business development and employment | - Lay business strategies to empower Maasai community  
- Develop sustainable businesses with a modern outlook, culturally sensitive and international linkages.                                                               | Develop business strategies  
  - This will be pursued through partnerships, financing, local business skills and extraction of Maasai natural resources  
  Business proposals:                                                                                                                                               |
- Equitably generate and share economic and employment opportunities

- Marketing of goats to Islamic nations
- Tourism opportunities for Maasai culture
- Natural health remedies – Traditional herbal medicine
- Maasai handmade craft
  o Marketing them overseas
  o Develop a website with the history of the indigenous community, Maasai culture, and the meaning of the different colors of the beads
  o Purchase the handmade craft for display in Whakarewarewa in New Zealand
- Direct use of geothermal energy – Drying food and vegetables, bathing, dyeing of fabric

5. CONCLUSION

The paper has identified gaps in community engagement activities previously undertaken by KenGen and which calls for a strategic approach that is value based. The need for mutual community engagement is key to ensure that emerging community issues are addressed through agreeable principles and values for success of KenGen’s power projects. The company has therefore formulated a Community Engagement Strategy that acknowledges the needs of the host Maasai Community’s long-term Vision 2050.

KenGen intends to implement effective and efficient community engagement initiatives borrowing to the best lessons leant through exchange programme with New Zealand. The strategy is expected to be embedded within all levels Company’s corporate structure and involve all staff, stakeholder and relevant contractors. The strategy will therefore be rolled out to KenGen top management, staff, the communities and stakeholders to help them understand and operate within KenGen’s values and principles.
