

Corporate
Club

Welcome to the IGA Corporate Club

Whether you are a high-class company, or just entering the geothermal market, or simply keen to increase your geothermal project portfolio, you have come to the right place.

Cross-over and technology transfer, turnover increase, strong partners and new projects, active networking, personalized collaboration plans and online visibility - together we help you gain global recognition.

The world's biggest challenge at this moment is to transform the energy system and geothermal energy is one of the solutions to achieve that transformation.

The IGA is best positioned to create visibility for geothermal and show leadership in the energy transformation process by setting international standards, harness best practices, and connect the game changers in renewable energy. Reykjavik

Energy underwrites the mission of the IGA and is proud to be connected to an association that has the clear vision to accelerate the uptake of geothermal energy in the energy mix: today and tomorrow

**Bjarni Bjarnason,
the CEO of Reykjavik Energy**

**Why to become a
Corporate Member**

How to become a Corporate Member

Choose a corporate category

We have three corporate categories: Giga, Mega, Kilo. The overview of each is presented below. You can also visit the **corporate page** on our website.

As a world-class company you are keen to shape and define the geothermal agenda for the upcoming years. You are actively seeking influence in order to increase geothermal project portfolio through agenda setting and engagement with political and industry leadership at global level.

Shape the renewable future
Get involved in the high-level talks
Set geothermal practices and standards

About the IGA

The IGA aims at being the leading world authority in matters concerning the research and development of geothermal energy by setting educational standards and offering worldwide energy solutions and in-house technical support, with special support for countries in early stages of geothermal development. We connect the Global Geothermal Community, serving as a platform for networking opportunities aimed at promoting and supporting global geothermal development. We embody a wide variety of members ranging from academy to industry representatives.

Future global energy needs can be based on a 100% renewable energy mix, and at the IGA we are committed to make geothermal energy a significant part of that

Encourage, facilitate and promote the development of geothermal resources, as well as innovative research in geothermal technologies, through visible and integrated position
